

CoreLogic Nominated for INMAN Real Estate Innovation Award

IRVINE, Calif., June 20, 2016—CoreLogic® (NYSE: CLGX), a leading global property information, analytics and data-enabled services provider, announced today it has been [nominated](#) for the coveted Inman Innovator

Award for 2016. The awards are given each year by [Inman News](#) to recognize and celebrate innovation and accomplishments in the real estate industry. The winners will be announced by Inman at a red carpet gala event on August 8, 2016, in San Francisco.

CoreLogic is nominated for its work on Trestle™, a new solution that addresses the fundamental data access and data management problems that real estate brokers, technology providers, and multiple listing organizations struggle with today. At the same time, Trestle simplifies the delivery of CoreLogic property intelligence to a broad audience of real estate professionals and technology vendors.

With a production launch scheduled for this summer, Trestle is a national marketplace that connects data sources with data recipients. Trestle is recognized for a variety of features that help multiple listing organizations improve control and management of their listing data relationships. Key Trestle innovations include the combination of listing data with access to best-in-class CoreLogic property data, access to premium automated valuation content, and the aggregation of national listing data into a single repository certified by the Real Estate Standards Organization (RESO). With Trestle, brokers and technology providers can power their real estate applications with high quality listing data enhanced with unique CoreLogic property intelligence not available on popular Internet search portals.

“We’re honored to be nominated for this prestigious award,” said Chris Bennett, general manager of real estate solutions for CoreLogic. “Helping multiple listing organizations achieve RESO certification was the catalyst for developing Trestle, but the vision has become so much more. For multiple listing organizations, Trestle provides data standardization, distribution control, contract management, and fee processing. We’re already in discussions with several third parties who want to deliver their content via the Trestle marketplace and API. For brokers, Trestle offers a single source for all their listing data, as well as access to unique CoreLogic property content that the big portals don’t have. For technology providers, Trestle provides access to a national data source and the

opportunity for greater innovation. The idea is to make working with real estate data easier than it's ever been.”
